

ABSTRACT OF THE DISCLOSURE

In a conventional display device comprising a sub-display, the display device is increased in thickness and
5 in the number of components as the number of displays is increased. In the present invention, a dual emission display device is used so that either surface of a display is used as a main display or a sub-display. Accordingly, the display device can be reduced in thickness and in the number of
10 components. Further, mechanical reliability can be enhanced when the invention is applied to a tablet PC, a video camera
and the like.
